

X-TECH

How does X-Tech Agency work?

We offer 3 core services at prices around 80% to 90% off the actual cost of these implementations today.

1. Professional Web Design (express AI redesign)

- Download the current business website, extract real branding (logo, colors, typography, copy, pricing, reviews, history).
- Generate a **diagnostic.md** with 5 specific, observable issues (e.g., "the phone number is not clickable on mobile view").
- Rebuild an immersive "3D movie-like" one-page landing with animated scroll, fully responsive, using the actual branding.

✓ **Client Benefit:** modern brand perception, better conversion (visible CTAs, click-to-call/WhatsApp), tangible demo in minutes that would previously cost weeks of agency work.

2. What is AEO (Answer Engine Optimization)

Optimize content so AI answer engines (ChatGPT, Perplexity, Google AI Overviews, Gemini, Copilot) cite or directly recommend your business, rather than just appearing in a list of links (classic SEO).

What it means in practice:

- **Structured content**, with direct answers and clear hierarchy (H1-H2, lists).
- **Data marked up** with schema.org (entity, FAQ, product, local business).
- **Thematic depth and "citability"**: being mentioned by reliable sources (reviews, press, forums) reinforces the LLM associating the brand with the solution.
- **llms.txt and technical accessibility** so AI crawlers can read the site.
- **Does not replace SEO**: it complements it. Without SEO, there is no raw material for AI to summarize, but ranking on Google doesn't guarantee being cited in ChatGPT or Perplexity, as each engine chooses different sources. (SmartGrowth)

Why it matters now: Gartner estimates traditional Google searches will drop 25% by 2026, and 70% of brands are currently invisible to LLMs like ChatGPT even if they rank well on Google. The commercial impact of being "the answer" for an AI can exceed ranking first on traditional search engines.

3. SEO Business Audit (360° diagnostic)

- **External Diagnostic (public):** website, social media, offers/pricing, copy, active Meta ads, Google profile, reviews, competition → score 0-100.
- **Internal:** (36-question form filled by the owner): acquisition, scheduling, billing, tools, manual hours → maturity level 1-5.
- **The real differentiator:** crossing both halves (e.g., "you pay \$150/month on ads leading to a WhatsApp nobody checks").
- **ROI Calculation:** Calculates hours/month and \$/€ recoverable with automation, showing the exact math (data, not opinion).
- **Deliverables:** Generates an HTML report + phased action plan + commercial implementation proposal.

✓ **Client Benefit:** sees in dollars or euros exactly what they are losing, with literal evidence. And we help them change and improve these deficiencies.
